1. The following is an examiner's statement of reasons for allowance: Applicants have amended their claims to exclude Si-containing porous dielectric material that has under gone previous curing processes, i.e. polymerization or crosslinking, before the claimed plasma cuing step, thus removing the remaining rejections. On page 7 in their remarks of the 3/21/05 response, applicants explain why their specification supports this amendment, including discussing the meaning of paragraph [0012], where they appear to be stating that the process described therein does not involve any curing, i.e. any polymerization, hence their discussion will be taken as file wrapper estopple for the meaning in the specification, such as the catalyst & water step described on [0012] not being a polymerization step, since then it would not be "uncured" as stated.

Other art of interest includes Ko et al (2005/0048795 A1), Kim (200/0253388 A1) & Chang et al (2005/0064698 A1), who all employ plasma treatments after deposition, that might not involve curing, but none of these references are prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
